## ABOUT THE COMFORPEDIC BY SIMMONS™ LINE

Traditional memory foam mattresses have been available for years. And while their benefits of motion separation and pressure relief have remained constant, so have their problems. Consumers have complained about a sinking, hard-to-move sensation and excessive heat build-up. That's why the ComforPedic by Simmons™ line utilizes the next generation of memory foam. Created in a special vacuum-sealed chamber to increase air flow and resilience, ComforPedic® foam not only responds more quickly to body movements, but also dissipates heat to help keep consumers at the ideal sleeping temperature. The result is a mattress that provides the ideal combination of comfort and support—without feeling like you're sleeping in quicksand.

### Key ComforPedic® Next-Generation Memory Foam benefits:

- **Dissipates heat** – Uniquely formulated memory foam dissipates heat to help keep you at your ideal sleeping temperature.
- **Quicker Recovery** – Patented foam technology responds quickly to move more freely with your body's contours.
- **Consistent Comfort** – Conforms to your body from the moment it arrives to help eliminate any break-in period or changes in feel due to room temperature fluctuation.
- **Patented Edge® Support System** – Through an innovative geometric construction, our Edge® Support System firms up the sides of the bed for stability while sitting and extends the sleeping surface of the mattress all the way to the edge.

### Four models are available in the ComforPedic® line.

- **Original™**
